Solution: For $A \neq 0 = 2^s$ 1 and $k = (2^s)^2$ Nm 1; For $B \neq 0 = 3^s$ 1 and $k = (3^s)^2$ Nm 1 The amplitude A and phase ϕ are determined by the initial conditions Two initial conditions are needed to completely specify a solution This follows from the fact that the governing equation (12) is a second order differential

CHAPTER 8: MATRICES and DETERMINANTS

we arrive at an equation whose solution set is obvious The steps of adding 1 to both sides of the first equation and of dividing both sides of the second equation by 2 are like "legal chess moves" that allowed us to maintain equivalence (ie, to preserve the solution set) Similarly, equivalent systems have the same solution set
