### **ISO 6892: Metallic Materials for Tensile Testing**

Part 1: Method of test at room temperature for metallic materials — Version of 2009 (ISO 6892-1:2009) replaces previous editions of ISO 6892-1:2001 and ISO 6892-1:2009. The aim of the revision is to improve the consistency of the test method and to align it with the requirements of ISO 6892-2. The revision includes changes to the test method, the test rate, the test temperature, and the test specimen geometry. The test rate is now defined as a constant strain rate of 0.005 mm/min. The test temperature is now defined as room temperature, which is between 10 °C and 30 °C. The test specimen geometry is now defined as a dog-bone shape with a gauge length of 50 mm. This revision of ISO 6892-1 is in line with the requirements of ISO 6892-2, which is also being revised.
